WORK EXPERIENCE

Data Analyst Intern *Internship | Nov 2025 – Jan 2026 | Remote*

Chi² data analytics and artificial intelligence GmbH

DATA ANALYSIS Python

- Analyzed structured research datasets using statistical inference and predictive modeling to support data driven decision making in scientific workflows.
- Standardized data preprocessing pipelines and output formats, enabling reusable analytical workflows and consistent downstream integration.
- Delivered end to end analyses independently within defined timelines while maintaining accuracy, reproducibility, and documentation standards.

Master Thesis - Computer Vision *Full-Time | Nov 2024 – May 2025 | Würzburg, Germany*

Joint Image Classification and Anomaly Detection for Efficient Inspection of Reusable Containers

Technische Hochschule Würzburg-Schweinfurt

- Developed a multi-view joint classification and anomaly detection pipeline for reusable containers using data captured from five fixed camera angles in a real reconditioning facility.
- Reduced inference time through architectural optimisation, enabling efficient inspection workflows for high-volume image data.
- Containerised the full pipeline using Docker for reproducible deployment and experimentation.
- Evaluated early vs late fusion strategies; late fusion achieved 96% classification accuracy and 0.85 AUROC for anomaly detection.

Software Engineer *Full-Time | Jan 2021 – Mar 2023 | Bengaluru, India*

Altisource

BACKEND SYSTEMS Java | Spring Boot | SQL

- Designed and maintained Spring Boot microservices for distributed backend systems, processing high volume transactional data with over 90% service availability.
- Implemented REST and SOAP APIs to enable real time and near real time data exchange between internal platforms and external vendor systems.
- Integrated Stripe payment workflows using REST APIs and webhooks to enable real-time transaction updates and automated reconciliation, ensuring secure and consistent backend operations.
- Reduced payment failures by 40% through reliable callback handling and improved traceability of end-to-end transaction states.
- Implemented structured validation and error handling logic, improving data reliability and reducing recurring production incidents by 25%.

DEVOPS AND SYSTEMS AWS | Docker | CI/CD

- Containerized and deployed more than 10 backend services using Docker on AWS ECS and EKS, improving scalability, fault tolerance, and runtime consistency.
- Built and maintained CI CD pipelines using Bitbucket and Bamboo, accelerating release cycles by 30% and reducing manual deployment effort.
